НАУЧНОМ ВЕЋУ  
ИНСТИТУТА ЗА ФИЗИКУ, Београд

Предмет:    Захтев за покретање поступка за реизбор у звање  
              **Виши научни сарадник**

Молим Научно веће Института за физику да у складу са Законом о научно-истраживачкој делатности покрене поступак за мој реизбор у звање Виши научни сарадник.

Прилози:

1. Сагласност руководиоца пројекта и предлог чланова Комисије.
2. Биографски подаци са библиографијом
3. Кратки опис научне и стручне активности

  
ПОТПИС  
Др Радмила Панајотовић

04. Мај 2017.

## Сагласност руководиоца пројекта и предлог чланова Комисије за писање извештаја

Др Радмила Панајотовић је од новембра 2012. године ангажована са пуних дванаест истраживачких месеци на пројекту ОИ171005 „Физика уређених наноструктура и нових материјала у фотоници“, под мојим руководством, а на посебним задацима експерименталног истраживања везаним за нови правац истраживања у оквиру наведеног пројекта. Тема истраживања Др Панајотовић је испитивање морфолошких, електричних и хемијских особина самоорганизујућих органских молекулских структура формираних на проводним и диелектричним супстратима, са посебним нагласком на силицијум диоксид и 2Д-материјале, као што је графен. Циљ испитивања оваквих хетероструктура је градња ефикасних и робусних биохемијских и фото-сензора, као и осетљивих детектора наелектрисаних честица. Овај правац истраживања је потпуно нов и у оквиру Института за физику и шире, у Србији. Др Панајотовић у својим истраживањима примењује методе Атомске микроскопије силе, микроскопије Келвиновом пробом, фотоелектронске и инфрацрвене спектроскопије, и многе друге. Такође, она је истраживач са установљеном научном репутацијом ( $h - index = 13$ , *Googl Scholar*), била је активна и у организационим активностима, као генерални секретар две међународне конференције, и у сарадњи са страним лабораторијама. Моментално је ментор докторског студента.

Сагласан сам са кандидатуром Др Радмиле Панајотовић за реизбор у звање Виши научни сарадник и предлажем следеће чланове Комисије за писање извештаја:

- **Др Радош Гајић** – Научни саветник, Институт за физику, Београд  
Главне области истраживања Др Гајића су метаматеријали, фотонски кристали, елипсометрија, нано-оптика, високо-температурска суперпроводност и графенски материјали
- **Др Братислав Маринковић** – Научни саветник, Институт за физику,  
Главне области истраживања Др Маринковића су електронска и ласерска спектроскопија атома и молекула (укључујући биомолекуле).
- **Др Јелена Трајић**, Виши научни сарадник Института за физику, Београд  
Главне области истраживања Др Трајић су оптичка својства полупроводника, полумагнетних полупроводника и диелектрика, динамика решетке, Инфра-црвена и Раман спектроскопија.
- **Проф. Др Сунчица Елезовић-Хацић** – Редовни професор Физичког факултета Универзитета у Београду  
Главне области истраживања Професорке Елезовић-Хацић су полимерне структуре и неуређени органски и неоргански системи

.....  
Руководилац пројекта ОИ171005  
Др Радош Гајић

у Београду, 04. 05. 2017.

## Curriculum Vitae

### Dr Radmila Panajotović

#### *Prethodne i sadašnje pozicije (zaposlenje)*

---

07. 2012. - Viši nučni saradnik, Institut za fiziku, Beograd  
Projekat OI171005 „Fizika uređenih nanostruktura i novih materijala u fotonici“
07. 2011. - 05. 2012. Naučni saradnik Instituta za fiziku, Beograd, Srbija; projekti - „Elektronske, transportne i optičke osobine nanofaznih materijala“ (171033), a drugim na projektu „Fizika uređenih nanostruktura i novih materijala u fotonici“ (171005), finansiranim od strane Ministarstva za Nauku i Prosvetu Republike Srbije.
10. 2007. – 11. 2010. Postdoktorska pozicija (Research Fellow) u Centru za fiziku i astronomiju, na Otvorenom Univerzitetu (Open University), Milton Kijns (Milton Keynes), Velika Britanija
03. 2004 - 02. 2007. Postdoktorska pozicija u Centru za nuklearnu medicinu i radiobiologiju Univerzitet u Šerbruku (University of Sherbrooke), Šerbruk (Sherbrooke), Kvebek, (Quebec), Kanada
11. 1999 - 11. 2003. Postdoktorska pozicija u Laboratoriji za atomsku i molekularnu fiziku (Atomic and Molecular Physics Laboratory), Istraživačka škola fizike i inženjerstva (Research School of Physical Sciences and Engineering), Australijski nacionalni univerzitet (Australian National University), Kanbera, Australija
- 10.1989. – 11. 1999. Magistarske i doktorske studije u Institutu za fiziku, Beograd, Jugoslavija/ Srbija

#### *Akademsko obrazovanje i trening*

---

06. 07. 1999. **Doktorat** iz oblasti eksperimentalne fizike atoma i molekula, Fizički fakultet, Univerzitet u Beogradu, Beograd, Jugoslavija
24. 06. 1993. **Magistarski rad** iz oblasti eksperimentalne fizike atoma i molekula, Fizički fakultet, Univerzitet u Beogradu, Beograd, Jugoslavija
14. 07. 1989. **Diplomski rad** iz oblasti eksperimentalne fizike atoma i molekula, Fizički fakultet, Univerzitet u Beogradu, Beograd, Jugoslavija

#### *Neformalni trening*

- 03.2001. - 06. 2001. CEDAM interaktivni kurs Podučavanje na univerzitetu (*Teaching at University*), Australijski nacionalni univerzitet, Kanbera, Australija
11. 1996. - 07. 1997 Poslediplomski staž na Univerzitetu Pjer i Marija Kiri, Pariz VI, Pariz, Francuska

## ***Grantovi, nagrade i priznanja***

---

- SIT (Senior Scholar in Training) grant za prezentaciju i predavanje na mini-simpozijumu u okviru konferencije *Radiation Research Society Conference* na Mauiju, Havaji, Sjedinjene Američke Države
- COST-ECCL grant za kolaborativnu posetu u martu 2009. godine, na Univerzitetu Bielefeld, Nemačka
- Mari Kiri Internacionalni Reintegracioni grant (poziv 2007) (Marie Curie International Reintegration Grant) - 100 000 EUR za period od četiri godine (2008 – 2012)
- Leverhulme Trust Istraživački grant (Researcher Fellowship)
- SIT (Scholar in Training) grant za oralnu prezentaciju rada na konferenciji *Radiation Research Society*, (2006) Filadelfija, Sjedinjene Američke Države
- Istraživački grant za opremu (Research Equipment Fund grant funding – RIEF) sa Prof. Stiven Bakman, Dr Maarten Hoherland i Dr Džulijan Louer) za 2001. godinu (92 000 AUD).
- Stipendija francuske Vlade (bivši CIES) za osmomesetni boravak u Laboratoriji za dinamiku jona i molekula (Laboratory for the Dynamics of Ions and Molecules - DIAM), Univerzitet Pjer i Mari Kiri, Pariz, Francuska (1996-1997).
- Nagrada Instituta za fiziku u Beogradu za najbolji magistarski rad za 1993. godinu.

## ***Članstva u profesionalnim udruženjima***

---

Radiation Research Society of Serbia

## ***Istraživačko iskustvo***

---

### Tehnike skenirajuće mikroskopije

Atomska mikroskopija sile, uključujući skeniranje kelvinovom probom – analiza topoloških i elektrostatičkih osobina tankih filmova organskih i neorganskih materijala u ambijentalnim uslovima I u uslovima ultra-visokog vakuuma.

### Tehnike pripreme tankih filmova

Priprema i transfer Langmir-Blodžet jednostrukih i višeslojnih molekularnih uzoraka. Termički i hemijski tretman silicijumskih supstrata.

### Spektroskopija biomolekula u kondenzovanoj fazi

Fotoelektronska spektroskopija x-zracima (X-ray photoelectron spectroscopy – XPS I NEXAFS) tankih kondenzovanih filmova.

Elektronska spektroskopija gubitka energije (High-Resolution Electron Energy-Loss - HREEL) rasejanja niskoenergijskih elektrona na molekularnim filmovima koji sadrže DNK i njene konstituente.

Analiza jednostrukih i dvostrukih prekida u strukturi DNK izazvanih udarom niskoenergijskih elektrona.

FT-IR spektroskopija tankih filmova.

### Elektronska spektroskopija molekula u gasnoj fazi

Merenja apsolutnih elastičnih i neelastičnih efikasnih preseka i ekscitacionih funkcija za elektronsko rasejanje na molekulima (azot, azot monoksid, etilen, tetrafluoroetilen, itd.), kao i merenja negativnih molekularnih jona.

Koincidentna merenja elektrona i proizvoda sudara sa atomima i molekulima primenom metode vremena preleta i sinhrotronskog zračenja (Time-of-Flight)

### Elektronska spektroskopija atoma

Merenja apsolutnih elastičnih i neelastičnih efikasnih preseka i ekscitacionih funkcija za elektronsko rasejanje na parama metala (živa, cink, magnezijum) i plemenitih gasova (argon, helijum).

Merenja metastabilnih atoma i negativnih atomskih jona.

Koincidentna merenja rasejanja elektrona na atomima plemenitih gasova (helijum, ksenon).

### ***Pregled iskustva u eksperimentalnim tehnikama i metodama***

---

Sistemi i instalacije ultra visokog vakuuma.

Rad na sinhrotronskim linijama.

Infracrvena spektroskopija.

Atomska mikroskopija sile.

Projektovanje, gradnja implementacija elektronsko-optičkih sistema (pulsirani izvori elektrona, detektori naelektrisanih čestica).

Rad sa masenim spektrometrima.

Proizvodnja tankih filmova kondenzovanih molekula metodama isparavanja, liofilizacije i prenosa sa graničnih površina (vazduh/tečnost).

Manipulacija i prečišćavanje plazmidne DNK.

Korišćenje instrumenata za detekciju naelektrisanih čestica i obradu signala.

Operativnost sa komercijalnim programskim paketima - CASA, OMNIC, EIS, Material Studio, SIMION, Lab View, COBOLD, Origin, Microsoft Office, etc

### ***Pedagoški rad***

---

Ko-mentorstvo diplomskog (Joanne Harrison) i doktorskog studenta (Milica Jelisavčić)

Obuka studenata u laboratorijskom radu.

Predavanja, ispiti i ocenjivanje studenata.

Obuka studenata u pisanju finalnih izveštaja.

Predavanja fizike u srednjoj školi po Kejmbridž kursu.

### ***Dodatno iskustvo i aktivnosti***

---

Organizovanje međunarodnih konferencija (Generalni sekretar za PHOTONICA13 i TABIS2013)

Organizovanje seminara u okviru grupe i Centra.

Recenzija članaka za istaknute međunarodne časopise - *Journal of Physical Chemistry, Physical Chemistry Chemical Physics, Nucleic Acids Research, Applied Surface Science, Journal of Physics D*.

Gost-editor za poseban broj časopisa *Physica Scripta*.

Član grupe eksperata za ocenjivanje REA-FET-OPEN Horizon2020 projekata.

Tečno znanje engleskog i francuskog jezika.

### **Spisak publikacija, pozivnih predavanja i prezentacija na konferencijama**

#### *Publikacije u naučnim časopisima*

## Dr Radmila Panajotović, Viši naučni saradnik

Dr Radmila Panajotović je doktorirala (1999.) na Fizičkom fakultetu Prirodno-matematičkog fakulteta Univerziteta u Beogradu godine, u oblasti eksperimentalne atomske i molekularne fizike, na temi elektronske spektroskopije para metala (eksperimentalna merenja urađena u Institutu za fiziku, Beograd). Posle završenih doktorskih studija provela je više od deset godina na post-doktorskom usavršavanju u inostranstvu, u renomiranim laboratorijama na Australijskom Nacionalnom Univerzitetu (Kanbera, Australija), Medicinskom fakultetu Univerziteta u Šerbruku (Kvebek, Kanada) i Otvorenom univerzitetu (Milton Kijns, Velika Britanija), gde je radila u oblasti elektronske, fotoelektronske i infracrvene spektroskopije molekula u gasnoj i kondenzovanoj fazi. Od 2004. godine glavna tema njenih istraživanja su interakcije elektrona sa biomolekulima, posebno sa molekulom DNK i izolovanim nukleinskim bazama u obliku tankih filmova, sa ciljem otkrivanja vrste i veličine oštećenja koje sekundarne naelektrisane čestice ("δ-electroni"), kreirane duž traga jonizujućeg zračenja, proizvode na ćelijskom genetskom materijalu. Ovo istraživanje je imalo za cilj otkrivanje mogućih procesa koji dovode do kidanja lanaca DNK zdravih ćelija, kao i poboljšanje efikasnosti radioterapije kanceroznog tkiva. U martu 2008. godine, Dr Panajotović je, kao dobitnica Mari Kiri FP7 granta (*Research Fellowship* – za reintegraciju kvalitetnih evropskih naučnika koji borave van Evrope), započela rad na svom originalnom projektu istraživanja dejstva elektrona niskih i srednjih energija na samo-organizujuće molekule fosfolipida u obliku jedno- i višeslojnih tankih filmova na provodnim, poluprovodnim i izolatorskim supstratima. Od 2012. godine Dr Panajotović ponovo radi u Institutu za fiziku, Beograd, a u sklopu projekta OI171005 ("Fizika uređenih nanostrukture i novih materijala u nanofotonici") na temi ispitivanja morfoloških i električnih osobina heterostruktura sastavljenih od samoorganizujućih biomolekula (fosfolipidi, amino kiseline) i tankih filmova 2D-materijala (grafen, MoS<sub>2</sub>, WS<sub>2</sub>). Glavni cilj ovog istraživanja je dizajn i karakterizacija o-FET (organski-*Field-Effect-Transistors*) i TF-FET (Tanki-film - *Field-Effect-Transistors*) biohemijskih senzora kojima bi bilo moguće detektovati metabolički važne molecule u gasnoj i tečnoj fazi. Osim ove teme, istraživačke teme Dr Panajotović uključuju i samorganizujuće osobine biomolekula važnih za funcionisanje biomembrane, adheziju nano-čestica na 2D-materijalima i njihov transport kroz biomolekularne structure, adsorpciju molekula i njihove osobine vezane za alternativne izvore energije, kao i interakcije naelektrisanih čestica sa materijalima.

- Spektroskopija i atomska mikroskopija efekata sudara elektrona sa fosfolipidnim filmovima

Eksperiment se sastojao u merenju efekata dejstva usmerenog monoenergijskog mlaza elektrona energije od 5 do 100 eV na tanke filmove fosfolipida i njihovih kompleksa sa aminokiselinama, primenom FT-R spektroskopije. Pokazano je da se oštećenja fosfolipidnih filmova izazvana elektronima ne javljaju u slučaju prisustva amino kiselina – glicina i arginina. Vibracioni FT-IR spektri su pokazali da ovo zaštitno dejstvo nije rezultat hemijskih kompleksa amino kiselina sa lipidima, već klasterizacije amino kiselina na njihovoj površini koja dovdi do efekta "negativnog" naelektrisanja površine i nemogućnosti prodiranja elektronkog mlaza u oblast fosfolipida.

- Ispitivanje dipolnih interakcija tankih biomolekulskih filmova

Pomoću Atomske spektroskopije sile i Kelvinove probe, posmatrane su i merene promene elektrostatičkog potencijala fosfolipidnih molekula i amino-kiseline arginina deponovanih na dielektričnom i provodnom supstratu i uočeno je da se supra-molekularna struktura lipida

odslikava na oblik, veličinu i naelektrisanje klastera arginina. Zaključak ovog istraživanja je da se, suprotno teorijskim proračunima i delu ranijih eksperimenata na dvostrukim slojevima, u ovim strukturama ne javlja, ni prestrukturiranje, ni prodor molekula vode, a ni hidriranih klastera arginina, u dublje slojeve lipidnih filmova. Takođe, (XPS) fotoelektronski spektri fosfolipida su potvrdili da je prodor molekula vode u fosfolipidni film nedovoljan za transport argininskih klastera.

- Merenje veličine i oblika individualnih nano-čestica silicijum dioksida u morskoj vodi  
U okviru COST akcije TD1002 (AFM4NanoBioMed) izvršena su merenja standardizacije postupaka merenja individualnih čestica silicijum dioksida i njihovih klastera suspendovanih u ultra-čistoj vodi i u uzorku morske vode iz severnog Jadrana. Zaključak ovih merenja je da potencijalni toksikološki efekti prisustva ovih nano-čestica u morskoj vodi zavise od sezone i količine organske materije u moru, tj. da ona direktno utiče na veličinu i oblik klastera. U pogledu standardizacije merenja, napravljena je baza mernih rezultata iz pet evropskih laboratorija (Ruđer Bošković, Hrvatska; CEA Marcule, Francuska; INSERM, Francuska; Institut za fiziku, Beograd, Srbija; LGM-CIMaINa, Italija, Institut Gabrijel Lipman, Luksemburg).

- “XPS”- Fotoelektronska spektroskopija tankih filmova 2D-materijala

U saradnji sa kompanijom Thermo Fischer Scientific (UK) i Univezitetom Notre Dame (USA), urađena su merenja na grafenskim filmovima dopiranim azotnom kiselinom, kao i ostalim 2D-materijalima,  $WS_2$ ,  $MgB_2$  i h-BN. Merenja na azotom dopiranom grafenu (deponovanom iz tečne ekfolijacije na PET supstratu), na sobnoj temperaturi, prisustvo hemijskih veza azota i kiseonika u površinskim slojevima grafena tretiranog pomoću  $HNO_3$ . Hemijska modifikacija grafena azotom se najbolje manifestovala kroz pomak vezivne energije u hemijskoj vezi ugljenika i kiseonika. Ispostavilo se da je u dopiranom grafenu kiseonik smešten u dubljim slojevima filma, najverovatnije između “flekica” grafena. XPS spektri su, tako, pokazali da azot nije vezan u samu strukturu grafena jer bi to značilo n-dopiranje, što nije slučaj. Zaključak je da, najverovatnije, povećanje provodnosti azotom dopiranog grafena potiče od C=O-, C(O)OH- i NO veza.

Pored ovog, merenja na tankim filmovima 2D-materijala su pokazala da je grejanje tankih filmova (iz tečne ekfolijacije) od suštinskog značaja za njihove električne performanse i da je prisustvo vode u strukturi površine značajno u smislu degradacije granularne strukture i provodnosti ovih filmova.

Dr Panajotović je ekspert u širokom spektru eksperimentalnih tehnika i instrumenata, kao što su tehnika ultra-visokog vakuuma (UHV), elektronska optika, depozicija tankih filmova, tehnika Langmir-Blodžet za prenošenje tankih filmova na čvrste podloge, diodnih lasera, izora i detektora naelektrisanih čestica i fotona, korišćenja Atomskog mikroskopa sile, Infra-crvene spektrometrije, itd. Dr Panajotović je autor 23 rada u istaknutim međunarodnim časopisima koji su citirani više od 400 puta (h-index=13, Google scholar), velikog broja konferencijskih kontribucija i brojnih predavanja. Tokom svog post-doktorskog usavršavanja u inostranstvu bila je ko-mentor u izradi diplomskog i doktorskog rada, a momentalno je ko-mentor doktorantu Jasni Vujin. Takođe je bila predsedavajući na sekciji Radiation Physics na konferenciji RAD2015, obavljala funkciju Generalnog sekretara dveju međunarodnih, predstavljala Srbiju u menadžment komitetu COST TD1002, vodi saradnju sa Univerzitetom u Segedinu i Biofizičkim institutom u Segedinu, koji je deo Mađarske Akademije nauka i Radijacionom laboratorijom Univerziteta Notr Dam, u SAD. Aktivna je i kao recenzent u istaknutim međunarodnim časopisima i za projekte Horizont 2020.

## Citation Report: 24

(from Web of Science Core Collection)

You searched for: **AUTHOR:** (Panajotovic R\*) ...[More](#)

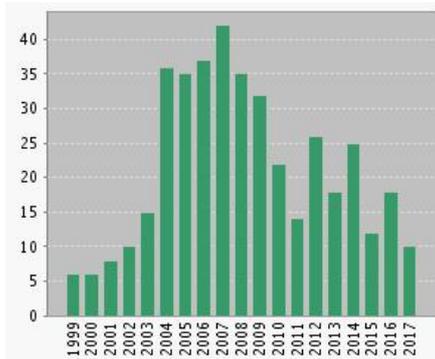

This report reflects citations to source items indexed within Web of Science Core Collection. Perform a Cited Reference Search to include citations to items not indexed within Web of Science Core Collection.

**Published Items in Each Year**

The latest 20 years are displayed.

**Citations in Each Year**

The latest 20 years are displayed.

Results found: 24  
 Sum of the Times Cited [?]: 407  
 Sum of Times Cited without self-citations [?]: 394  
 Citing Articles [?]: 365  
 Citing Articles without self-citations [?]: 355
