3. Elementi za kvalitativnu ocenu naučnog doprinosa

3.1 Izabrani radovi u kojima je doprinos dr Dragana Lukića bio ključan

1 D. V. Lukic, SEARCH FOR POSSIBLE EXOMOONS WITH FAST TELESCOPE, Research in Astronomy and Astrophysics, V17, (No 12) 121, (2017) [IF(2014)=1.371]

Dr Lukić razradjuje ideju detekcije egzomeseca preko radio talasa kao u slučaju meseca Jupitera. Posto nećemo biti u mogućnosti barem još deset godina da ih detektujemo optičkim metodama, u radu Dr Lukić razmatra mogućnost detekcije egzomeseca pomoću novog radio teleskopa FAST. Postoji mogućnost utvrđivanja njihovog postojanja u dva obližnja višeplanetarna sistema.

2 D. K. Markushev; D. D. Markushev; Sanja Aleksic; Dragan Pantić; S. P. Galović; D. V. Lukić; Jose Ordonez, Enhancement of the thermoelastic component of the photoacoustic signal of silicon membranes coated with a thin TiO₂ film, *J. Appl. Phys.* 131, 085105 (2022)

Dr Lukić je učestvovao u razvoju klasičnih eksperimentalnih metoda otvorene fotoakustičke ćelije u standardnom opsegu modulacionih frekvencija od 20 Hz do 20 kHz za ispitivanje jednoslojnih i višeslojnih uzoraka. Razmatrano je smanjenje uticaja fotogenerisanih nosilaca nanošenjem 200 nm tankog filma titanijum dioksida na 30- i 50 μm silicijumske membrane, čime se vraća njena fleksibilnost izgubljena pod uticajem fotogenerisanih nosilaca.

3 Katarina Đordjević; Dragana K. Markushev; Marica N. Popovic; Mioljub Nesic; Slobodanka Galovic; Dragan V. Lukić; Dragan D. Markushev, Photoacoustic Characterization of TiO₂ Thin-Films Deposited on Silicon Substrate Using Neural Networks, *Materials* 2023, 16(7):2865 doi: 10.3390/ma16072865.

Dr Lukić je učestvovao u razvoju optimalnih eksperimentalnih metoda kojima su poređena predviđanja neuronskih mreza sa eksperimentalnim rezultatima. Analizirana je mogućnost određivanja termičkih, elastičnih i geometrijskih karakteristika tankog filma TiO₂ nanesenog na silicijumsku podlogu, debljine 30 mm, u frekvencijskom opsegu od 20 do 20 kHz inteligentnom fotoakustikom.

Dobijeni rezultati su pokazali da primena neuronskih mreža u određivanju termoelastičnih svojstava tankog filma na nosećoj podlozi omogućava pozdanu procenu njegovih fizičkih karakteristika sa velikom tačnošću.

4 Aleksić, S.M., Markushev, D.K., Markushev, D.D., Pantić, D.S., Lukić, D.V., Popović M.N., Galović, S. P., Photoacoustic Analysis of Illuminated Si-TiO₂ Sample Bending Along the Heat-Flow Axes. *Silicon* **14**, 9853–9861 (2022)

I u ovom radu je dr Lukić ucestvovao u razvoju eksperimentalnih metoda za analizu dvoslojnih uzoraka fotoakustikom. Utvrđeno je da tanki slojevi mogu značajno menjati termičko stanje drugog sloja i stepen njenog savijanja. Opisani su odnosi između termoelastične komponente, pomeranja duž ose toplotnog fluksa i razlike gustine nosioca i temperatura na različitim stranama uzorka. Pokazalo se da dodavanje tankog sloja poluprovodničkoj podlozi može efikasno smanjiti uticaj fotogenerisanih nosilaca kao nosilaca toplote.

5. **D. V. Lukić** Active SETI in Solar system neighborhood, *Astrophysics and Space Science*, **363**, 159 (2018)

U radu je Dr Lukić predlažio naučno zasnovan METI (Messaging to Extraterrestrial Intelligence) program. Ako su sve civilizacije u Univerzumu samo primaoci, a ne civilizacije koje šalju poruke, onda nikakva SETI (Search for Extraterrestrial Intelligence) pretraga nema smisla. Otkrivanje samo procurelih radio signala je težak posao sa sadašnjim resursima. Strah od vanzemaljaca je neosnovan, imajući u vidu fizičke poteškoće i zahteve međuzvezdanog putovanja. Ako su moguće vanzemaljske civilizacije naprednije od naše u našoj okolini, onda mogu lakše da pokaže znakove života sa Zemlje koje mi odašiljemo nego mi sa njihovih planeta trenutno.
